

CIRP Hovercraft AI Traffic

Soule Landing to Stewart Route

By Dex Thomas

Hama's Hovercraft has found a new home on the glaciers above Stewart, BC. It is the land vehicle of choice for driving over the ice, solid terrain and water. With this amazing craft, it is possible to go all the way from Stewart, BC to the Summit Ice Station, almost 6000 feet in altitude ... and it can be done easily with a fascinating route.

To compliment this aspect of CIRP, Dex Thomas has created an AI package for the CIRP Hovercraft that, faithfully on the hour, makes a trip between Soule Landing and the Stewart, BC area.

Installation:

1. Unzip the veh_hovercraft.zip file and place the “veh_hovercraft_sm” folder into your SimObjects\boats folder in FSX.
2. Put the “trafficSouleHover.bgl” file into the Scenery\World\Scenery folder for FSX.

You can download the hovercraft from the CIRP EXTRA ADDONS table on the CIRP page so you can make the trip yourself! Be sure you have downloaded the Soule Glacier scenery file to give the hover a place to land!
