

RTMM MedEvac Dispatch #E051B

Recommended Vehicle: Any Search Vehicle

Scenery Needed: ORBX PFJ

Nature of Emergency:

- Mayday transmission from small fishing boat. Not a medical emergency (yet), the engine has stopped and the boat is in need of a tow. We need to locate the exact lat/long (way point) for the disabled boat and radio back coordinates so the Coast Guard ship can rescue the fisherman and tow the boat to safety. We know the direction of the transmissions from the emergency from three locations, CYPR, PANT and Langara Lighthouse.

Starting Location: Annette Island or Prince Rupert or Lagara Light at starting point: N54 15.3455 - W133 3.6774

Location of Emergency:

- Bearing from PANT: 162°
- Bearing from CYPR: 258°
- Bearing from Langara Lighthouse: 055°

Special Instructions:

- Use the bearings to determine the probable way point for the emergency and fly to it, noting the exact latitude and longitude, then radio back to the Coast Guard, the exact location. The cutter is already enroute from Ketchikan.
