

NOTAM: Thin Ice Markers for Amphibians

NOTAM: For Amphibians landing and taking off in ORBX Global Base/Vector, we have placed “thin ice” markers where the amphibian will sink through the thin ice. This only happens with Amphibians and only when the RTMM Season Switcher is set to WINTER. As you taxi, stay away from the yellow markers and as you take off, do so parallel to the line of yellow markers.

For all other aircraft, ski and wheeled ... you may follow the yellow markers for taxi and takeoff.
