

Whitman Lake Hydro (Herring Bay Area)

Whitman Lake Hydro is located just behind the community of Herring Bay, near the mountain. You will see a penstock run coming down the mountain from Whitman Lake. At the lake, there is a spillway/dam. The actual penstock for the two new power units will be subsurface in the lake.

- **NOTAM:** *This scenery location file is NOT part of the Alaska Power Project zip file that downloads all the rest of the facilities. We are keeping this one separate because some people have installed the PAYWARE PAKT airport (Ketchikan). This location is NOT compatible with that PAYWARE software. If you have this, just do not use this scenery location ... it will NOT work correctly.*

When the water comes down from the lake, it supplies both water for the hydroelectric turbines and for the fish hatchery located next to the power house.

We kept this one fairly simple to keep the hit on frame rates down in the already loaded Ketchikan Area.

There are two helipads, one at the plant and another up at the lake below the spillway.

- Dam Helipad: N55° 19.9886' ... W131° 31.8953'
- Plant Helipad: N55° 19.6597'... W131° 31.7836'
