

# BWEP Dispatch #P010M

**Recommended Vehicle:** Tundra/Float/Helicopter

**Scenery Needed:**

- BWEP Richardson Highway
- ORBX Base / ORBX Vector

**Nature of Problem:** There is a leak in an equalizer tank at the Pump Station at way point P010M. Load up all of the inflatable boom sections you can get onto your aircraft and fly it to the location as quickly as possible. The leak is growing and heading for Paxson Lake. The leak must be stopped and the spill halted immediately! Also you are transporting a troubleshooter to find the cause of the problem. Can you find it?

**Starting Location:** Paxson PAXK

**Special Instructions:** Start at Paxson. Fly south along the pipeline to way point P010M and land where you can. There is a road nearby, but there is traffic on it. You can land beside the road with tundra. With a helo, you can land near the orange smoke up by the oil spill. If you have an amphibian, you can land on the water and there is orange smoke on the shore. (If it is winter, expect ice on the lake).
