

RTMM - December 2022 Enhancements Plus December Bonus Update (Return to Misty Moorings)

As Asobo updates FS2020, RTMM continually updates the RTMM offerings. This document covers the December 2022 enhancements for RTMM and the December Bonus update.

1. We are making some internal (folder name) changes that could affect your next download (the name that you put into your community folder may be a little different from the name you now have there).
2. Recently, with the FS2020 addition of helicopters, we have been asked to add more helipads to RTMM. This enhancement begins our focus on helipads. As you can see from the Change Log below (attached), all of the "SPBs by JDL" (Alaskan Sea Plane Bases) and "Tongass Fjords Docks A and B" now have helipads and a green/white flashing navigational light.
3. We are not planning for any helicopter landing areas for the cabins. Our attempt is to keep RTMM area as realistic as we can. Adding the helipads to the SPBs and Docks "bends" this rule a little, but helipads blend in well with these SPBs and Docks and should not look out of place. For many of the remote docks, there will only be a small square patch of asphalt (with a windsock nearby).
4. There are two ways of downloading RTMM locations:
 - a. EXPRESS - you download one zip file, unpack it and add the items to your community folder for activation.
 - b. MANUAL - you can download individual folders mostly from the Scenery Page at RTMM. This gives you control over the RTMM locations you want to use in your community folder. It allows you to customize, but it takes longer to execute.
 - c. BOTH methods are documented on the [RTMM Home Page](#) for FS2020.
 - d. Also, don't forget there is a full set of updated [flight plans](#) for all of the RTMM locations, this has also been updated with the changes we have made in the change log.

Doug Linn and Norm Richards/RTMM

CHANGE-LOG - for December 2022

Lighthouses for AK V1.03

- small modifications at Mary Island Light

SPBs by JDL V2.6

- At 19P, relocated some streetlights to the correct positions
