

## Express Updates Change Log - 2022.12.29

The new "FLOW" mod makes using the helicopters much easier. I am re-locating the "Gate H1" on all SPBs, Docks, and Lighthouses so the helicopter will start perfectly with the new FLOW. The following ones are completed and ready for upload:

Tongass Fjords Docks A - V2.4

Tongass Fjords Docks B - V2.4

SPBs by JDL - V2.9

All of the helipad "parking" spots were adjusted to make this work for the new FLOW program.

There are three of the SPBs that don't work correctly, Coffman Cove, Port Protection, and Hoonah. All three of these start at 30,000 feet. A question for "why" has been posted on the FS2020 forum. **HERE**

NOTAM: We have found an irregularity in the terrain near the BERN Berner's Bay Cabin, columns of terrain going up to 30,000 feet. This is not being caused by RTMM or the ORBX Alaska Mesh.
